

Joint Declaration on the Security of Supply of Medical Radioisotopes

**OECD Legal
Instruments**

This document is published under the responsibility of the Secretary-General of the OECD. It reproduces an OECD Legal Instrument and may contain additional material. The opinions expressed and arguments employed in the additional material do not necessarily reflect the official views of OECD Member countries.

This document, as well as any data and any map included herein, are without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and boundaries and to the name of any territory, city or area.

For access to the official and up-to-date texts of OECD Legal Instruments, as well as other related information, please consult the Compendium of OECD Legal Instruments at <http://legalinstruments.oecd.org>.

Date(s)

Adopted on 15/04/2014
Noted by the Council on 17/12/2014

WE, the Ministers and representatives of Australia, Canada, Germany, Japan, the Republic of Korea, the Netherlands, Poland, the Russian Federation, Spain, the United Kingdom and the United States of America, **SHARE** a common interest in ensuring the security of supply of the most widely used medical radioisotope, molybdenum-99 (^{99}Mo) and its decay product, technetium-99m ($^{99\text{m}}\text{Tc}$), which is used in approximately 40 million medical diagnostic imaging procedures per year worldwide enabling precise and accurate, early detection and management of diseases such as heart conditions and cancer, in a non-invasive manner.

WE ACKNOWLEDGE, on the one part, that the production of $^{99\text{m}}\text{Tc}$ depends largely on a small number of reactors that are ageing and facing unplanned outages, planned refurbishment outages or planned permanent shutdowns, which increases the risk of disruption of the supply chain, unless new infrastructure is developed to replace these facilities before they shut down.

WE RECOGNISE, on the other part, that an unsustainable economic structure is threatening the reliability of the $^{99}\text{Mo}/^{99\text{m}}\text{Tc}$ supply chain, and that global action to move to full-cost recovery is necessary to ensure economic sustainability and long-term secure supply of medical isotopes.

WE AFFIRM that any action to ensure the reliability of supply of $^{99}\text{Mo}/^{99\text{m}}\text{Tc}$ must be consistent with the political commitments to non-proliferation and nuclear security.

WE CONFIRM our acceptance of the principles set forth in the policy approach released in June 2011 by the High-Level Group on the Security of Supply of Medical Radioisotopes (the HLG-MR principles) to ensure the long-term secure supply of medical radioisotopes, which were formally endorsed by the Organisation for Economic Co-operation and Development's (OECD) Steering Committee for Nuclear Energy on 28 April 2011.

WE COMMIT, with the aim of jointly promoting an internationally consistent approach to ensuring the long-term secure supply of medical radioisotopes, to implement the HLG-MR principles in a timely and effective manner, and to:

- Take co-ordinated steps, within our countries' powers, to ensure that ^{99}Mo or $^{99\text{m}}\text{Tc}$ producers and, where applicable, generator manufacturers in our countries implement a verifiable process for introducing full-cost recovery at all facilities that are part of the global supply chain for $^{99\text{m}}\text{Tc}$;
- Encourage the necessary actions undertaken by ^{99}Mo processing facilities or $^{99\text{m}}\text{Tc}$ producers in our countries to ensure availability of reserve capacity capable of replacing the largest supplier of irradiated targets in their respective supply chain;
- Take the necessary actions to facilitate the availability of $^{99\text{m}}\text{Tc}$, produced on an economically sustainable basis, as outlined in the HLG-MR principles;
- Encourage all countries involved in any aspect of the $^{99\text{m}}\text{Tc}$ supply chain, and that are not party to the present Joint Declaration, to take the same approach in a co-ordinated manner;
- Take the necessary actions described above by the end of December 2014 or as soon as technically and contractually feasible thereafter, aware of the need for early action to avoid potential shortages of medical radioisotopes that could arise from 2016;
- Report on an annual basis to the OECD Nuclear Energy Agency (NEA) on the progress made at the national level and support an annual review of the progress made at the international level, both in light of this Joint Declaration.

WE INVITE the OECD Nuclear Energy Agency (NEA) to further the objectives set out in this Joint Declaration by, among other actions, undertaking periodic reviews of the progress of the supply chain with implementing the HLG-MR principles.

About the OECD

The OECD is a unique forum where governments work together to address the economic, social and environmental challenges of globalisation. The OECD is also at the forefront of efforts to understand and to help governments respond to new developments and concerns, such as corporate governance, the information economy and the challenges of an ageing population. The Organisation provides a setting where governments can compare policy experiences, seek answers to common problems, identify good practice and work to co-ordinate domestic and international policies.

The OECD Member countries are: Australia, Austria, Belgium, Canada, Chile, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea, Latvia, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. The European Union takes part in the work of the OECD.

OECD Legal Instruments

Since the creation of the OECD in 1961, around 450 substantive legal instruments have been developed within its framework. These include OECD Acts (i.e. the Decisions and Recommendations adopted by the OECD Council in accordance with the OECD Convention) and other legal instruments developed within the OECD framework (e.g. Declarations, international agreements).

All substantive OECD legal instruments, whether in force or abrogated, are listed in the online Compendium of OECD Legal Instruments. They are presented in five categories:

- **Decisions:** OECD legal instruments which are legally binding on all Members except those which abstain at the time of adoption. While they are not international treaties, they entail the same kind of legal obligations. Adherents are obliged to implement Decisions and must take the measures necessary for such implementation.
- **Recommendations:** OECD legal instruments which are not legally binding but practice accords them great moral force as representing the political will of Adherents. There is an expectation that Adherents will do their utmost to fully implement a Recommendation. Thus, Members which do not intend to do so usually abstain when a Recommendation is adopted, although this is not required in legal terms.
- **Declarations:** OECD legal instruments which are prepared within the Organisation, generally within a subsidiary body. They usually set general principles or long-term goals, have a solemn character and are usually adopted at Ministerial meetings of the Council or of committees of the Organisation.
- **International Agreements:** OECD legal instruments negotiated and concluded within the framework of the Organisation. They are legally binding on the Parties.
- **Arrangement, Understanding and Others:** several ad hoc substantive legal instruments have been developed within the OECD framework over time, such as the Arrangement on Officially Supported Export Credits, the International Understanding on Maritime Transport Principles and the Development Assistance Committee (DAC) Recommendations.
